

1 Size

Always supply us with large images. Never smaller than 200 pixels. The bigger the better!

2 Resolution

This should always be high, this is the quality of the image, which will increase the quality of the site.

3 Subject Matter

When taking photographs think about what looks interesting. Attention to detail improves the quality of the site. Make sure the images are in focus and there is plenty of light.

4 Amount

The more images you supply the more choice the designers have, take lots of images.

5 Header

Headers are generally 960 pixels wide, please think about the images you would like in the header, it is landscape not portrait.

6 Never, Ever!!!

We can never ever make an image bigger! Images are made up of pixels so if an image is 20 pixels by 20 pixels we cant make pixels from nothing to make it bigger. If you were to increase the size it will just pixelate!

* Top Tips

- Use a Digital Camera
- Attention to Detail - Flowers, Straighten things up, Positioning
- Don't pull from google, or other sites.

Images should be as large as possible. High resolution images are best. Images should be at least 200 px wide.

Images should not be stretched, squashed or blurred.
