Free website health check

See how to boost the performance of your website from spotting typos to improving Google rankings.

It's free and easy, with no strings attached.

it'seeze websites

brilliant designs – better results

What's a health check?

Spelling mistakes. Broken links. Pages that are slow to load – or difficult for people with disabilities to use.

These things make your customers leave your site, heading for a competitor instead. Google doesn't like these mistakes either – making your site much harder for people to find. The result? Fewer sales.

Luckily, you're one step closer to the solution – by putting your site through our free health check.

We look for everything, including:

Grammar and spelling – get the basics right to impress Google and your customers ✓

How quickly your site loads – 40% of people leave a site if it takes longer than three seconds to load ✓

Mobile-friendly – if it doesn't work on a phone, your customers are more likely to go to a competitor ✓

Search results – see where you appear on Google, compared to your competitors ✓

Get started. Go to **itseeze.co.uk/health-check**

Fill in the form, and we'll email the results to you. If you have any questions about the results – or want to go through them in more detail, get in touch.
